Name Convention of Java Classes

Test.java File

```
class A{

}
class B{

}
class C{

}
class D{

}
```

Once we compile using command

javac Test.java

We will get 4 .class file name

A.class , B.class , C.class and D.class

Example 2:

File name Test.java

```
class A{

}
class B{

}
public class C{

}
class D{

}
```

Once we will compile program using command Javac Test.java , we will get compile time error.

```
C:\Users\Admin\Downloads\Java pro>javac Test.java
Test.java:7: error: class C is public, should be declared in a file named C.jav
a
public class C{
       ^
1 error
```

To fix above error, we need to rename file name as C.java then we will compile with command javac C.java and it will work fine.

Example 3: file name is Test.java

```
class A{
public static void main(String args[]){
	System.out.println("i m in class A.");
}
}
class B{
	public static void main(String args[]){
	System.out.println("i m in class B.");
}

}
 class C{
 public static void main(String args[]){
	System.out.println("i m in class C.");
```

```
}
}
class D{
public static void main(String args[]){
        System.out.println("i m in class D.");
}
}
```

Output:

```
C:\Users\Admin\Downloads\Java pro>javac Test.java

C:\Users\Admin\Downloads\Java pro>java A
i m in class A.

C:\Users\Admin\Downloads\Java pro>java B
i m in class B.

C:\Users\Admin\Downloads\Java pro>java C
i m in class C.

C:\Users\Admin\Downloads\Java pro>java D
i m in class D.
```
