

## How to take input at Run Time in Java Using Scanner Class ?

```
import java.util.Scanner;

class Mac
{
    public static void main(String args[])
    {
        Scanner so=new Scanner(System.in);

        int x,y,z;

        System.out.println("Enter the value of x:");
        x=so.nextInt();

        System.out.println("Enter the value of y:");
        y=so.nextInt();

        z=x+y;

        System.out.println("sum is:"+z);
    }
}
```

---

```
import java.util.Scanner;

class Mac
{
    public static void main(String args[])
    {
        Scanner so=new Scanner(System.in);

        String name;

        System.out.println("Enter Your name:");

        name=so.next();

        System.out.println("Hello "+name);

    }
}
```

---

```
import java.util.Scanner;

class Mac
{
    public static void main(String args[])
```

```
{  
    Scanner so=new Scanner(System.in);  
    String name;  
    System.out.println("Enter Your name:");  
    name=so.nextLine();  
    System.out.println("Hello "+name);  
  
}  
}
```

---

```
import java.util.Scanner;  
  
class Mac  
{  
    public static void main(String args[])  
    {  
        Scanner so=new Scanner(System.in);  
        char ch;  
        System.out.println("Enter any char:");
```

```
ch=so.next().charAt(0);
```

```
System.out.println("Entered char is: "+ch);
```

```
}
```

```
}
```

---

```
import java.util.Scanner;
```

```
class Mac
```

```
{
```

```
public static void main(String args[])
```

```
{
```

```
Scanner so=new Scanner(System.in);
```

```
int x;
```

```
System.out.println("Enter any binary number  
system:");
```

```
x=so.nextInt(2);
```

```
System.out.println("Decimal: "+x);
```

```
}  
}
```

---

```
import java.util.Scanner;
```

```
class Mac
```

```
{
```

```
    public static void main(String args[])
```

```
    {
```

```
        Scanner so=new Scanner(System.in);
```

```
        int x;
```

```
        System.out.println("Enter any octal number  
system:");
```

```
        x=so.nextInt(8);
```

```
        System.out.println("Decimal: "+x);
```

```
    }
```

```
}
```

---

```
import java.util.Scanner;

class Mac
{
    public static void main(String args[])
    {
        Scanner so=new Scanner(System.in);

        int x;

        System.out.println("Enter any hexa decimal
number system:");

        x=so.nextInt(16);

        System.out.println("Decimal: "+x);

    }
}
```
